

Demand Response Program

Larger than Light

Demand Response is a mechanism whereby facilities curtail power use during period of grid emergencies or peak power grid prices. By reducing electricity usage during these grid events, facilities can earn money to help reduce strain on the electric grid.

HOW DOES DEMAND RESPONSE WORK?

Commercial, industrial, and institutional customers are ideally suited for the demand response opportunity. Participants agree to reduce electricity consumption in response to abnormally high electric demand or electricity price spikes. In return, the participants receive recurring payments for amount of demand reduction performed.

Duquesne Watt Choices at a glance:

- Participate in the Demand Response Program to receive financial benefits for managing energy consumption in response to dispatched events.
- Participate in the Energy Efficiency Programs to receive incentives for purchase and installation of energy efficient equipment.
- Reduce your energy usage and electric bills.

WHAT ARE THE KEY RULES FOR DUQUESNE'S DEMAND RESPONSE PROGRAM?

Duquesne's Phase III Demand Management program requirements include:

- Facility must be an active Duquesne Light account
- Execution years are for summer 2017 through summer 2020. Your facility must be able to perform for one or more of the execution years.
 - Performance Season is June 1 through September 30
 - Event days are limited to weekdays (no holidays or weekend days will be event days)
 - Notification of event day is provided on a day-ahead basis by 12:00 noon eastern the day prior to the event
- Event Duration is four (4) consecutive hours to include the hours that the day's forecasted peak hours are >96% of the PJM RTO summer peak demand forecast
- Number of events: Maximum of six (6) events per year. If the day ahead forecast does not reach the 96% trigger, then no events are called.
- Co-participation: Customers may participate in both the PJM ELRP and the Duquesne DR programs.

HOW DO I GET STARTED?

1. Schedule a free evaluation of your facility's ability to participate in DR
2. After the assessment, review your enrollment options.
3. Work with your program representative to develop your facility curtailment and operations plans.
4. When event dispatch occurs, perform the curtailment per the plan
5. Get paid for your facility's performance
